

ABSTRACT OF THE INVENTION

- The present invention is an inflatable module which is breathable,
5 i.e. permits the passage of moisture vapor, and which further
incorporates a pressure relief means for reducing pressure in the inflated
portion should the module be subjected to sudden or excessive stress.
In a preferred embodiment of the invention, a pressure relief valve is
incorporated as the pressure relief mechanism in the inflatable module.
10 The present invention is further directed to an inflatable module having
increased seal strength to make it capable of withstanding the rigors of
use.
